

Laundry Wash

Capacity 5 m³/hour
Location Derbyshire, England
Date April 2007

Designed to recycle laundry wash water from a conventional washer extractor or from the more industrial tunnel washer.

Over 10 years of R&D within the laundry industry, Kirton's recycle unit is reliable, user friendly and cost effective. Payback periods on capital purchase are generally less than 12 month. Savings are generated not only in water savings but energy costs.

The recycle unit is often combined with a rain water harvesting system to maximise the efficiency of water usage with the laundry.
